

## Strategy Evaluation for In-class Care Mapping Activity

<b>Criteria</b>	<b>Met</b>	<b>Not Met</b>	<b>Comments</b>
Identifies pertinent patient history and assessment data			
Identifies priority nursing diagnoses based on patient history and assessment data			
States short and long-term outcomes using the SMART method (specific, measurable, attainable, realistic, and includes a time frame)			
Identifies evidence based nursing interventions			
Identifies rationales as to why each nursing intervention identified is appropriate for this patient			
Identifies how the concept of Evidence-based practice (EBP) applies to the process of developing an individualized care map			
Identify the QSEN EBP competency on the QSEN.org website			
Select the QSEN EBP knowledge, skills and attitudes met by completing the In-Class Care Mapping Activity
